

Curriculum Overviews

Mathematics

Students continue to develop their understanding of numbers and are introduced to patterns with hands-on activities and play. They learn to copy, continue and create patterns using colours, shapes, or objects, helping them recognise order and predict what comes next. Students also explore how numbers can be broken apart and put together in different ways by partitioning and combining collections up to 10. In addition, they compare groups of objects up to 20, using language such as “more than”, “less than”, and “the same as”.

Prep

Term 4, 2026

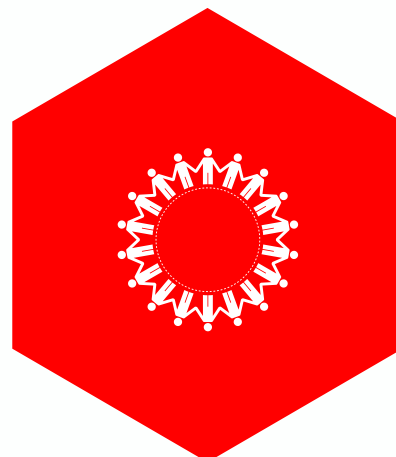

English

In phonics, our Prep students will continue to build on the foundational phonics knowledge learnt in Semester 1. They continue practicing segmenting and blending to build stronger word level fluency while also transferring these skills reading longer sentences and short decodable texts. Students understand and enjoy a range of picture books. They will make connections between characters, settings and events and notice how words and pictures work together to share meaning. Students create their own short pieces of writing, using words, phrases and images, to retell what they’ve read.

HASS

In Semester 2, students begin to explore the world around them by learning about familiar places - like their home, school, local park, library and shops. They begin to understanding how places are different, what makes them special and how we can take care of them.

Science

Students will engage in hands-on science experiences that encourage curiosity, exploration and wonder about the world around them. They will have opportunities to observe, explore and investigate everyday objects, materials and natural phenomena through play-based learning and simple scientific activities.

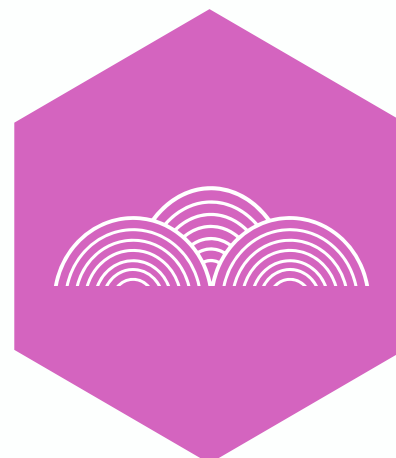

Health & Physical Education

Students develop their movement skills and learn about keeping themselves healthy and safe. They practise a range of fundamental movement skills, such as skipping, and explore ways to solve simple movement challenges through games and physical activities. Through fun and engaging experiences, students build confidence, coordination and an understanding of how to make positive choices that support their health, safety and wellbeing.

The Arts

In this term’s Music unit, students explore how music brings people together to celebrate Christmas in different cultures around the world.

Japanese

In Prep, learning Japanese is all about exploration, fun and curiosity! Through games, songs, stories and play, students will begin to experience a new language and culture.
