

Curriculum Overviews

Mathematics

Students will become pattern detectives, learning to recognise and continue patterns that increase and decrease by the same amount. They'll also practice spotting missing pieces in these patterns. In number, students will order and represent numbers up to 1 000. They'll deepen their understanding of place value by breaking down, rearranging, and renaming two- and three-digit numbers in different ways. Students will also work on their fluency to master addition and subtraction facts up to 20, along with multiplication facts for twos.

Year 2

Term 4, 2026

English

Students will dive into an exciting novel, learning how to really understand what's happening by connecting with the characters, settings, and events. They'll explore how stories are put together to share important ideas, noticing both words and pictures that bring novels to life. As budding writers, they'll get creative by taking an idea from a novel and adapting it in their own unique way. They'll organise their writing clearly and link their thoughts to make their message shine. They'll punctuate correctly to craft simple and compound sentences, helping their writing sound just right.

HASS

Students will continue to observe and describe events that happen in their local community. This helps them understand how people come together, celebrate, and make their community a special place.

Science

Students will engage in hands-on science experiences that encourage curiosity, exploration and discovery about the world around them. They will have opportunities to observe, explore and investigate everyday objects, materials and natural phenomena through practical activities and guided investigations

The Arts

In this term's Music unit, students explore how music brings people together to celebrate Christmas in different cultures around the world. In Dance, students use a toy as inspiration to explore movement and expression. They experiment with the elements of dance - such as space, time, and energy - to create and preform their own structured dance sequences.

Health & Physical Education

In Health and Physical Education, students learn to understand health messages and describe ways to keep themselves and others healthy, safe, and active. They also practise positive ways to interact and cooperate with others during physical activities, building teamwork and respect. These skills support their overall wellbeing and help them make good choices both in and out of school.
